

Sun Tamer Pool Heating Controllers

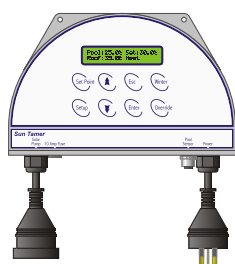

Eclipses all others

M i c k T e k

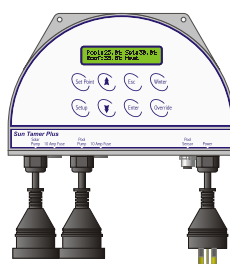

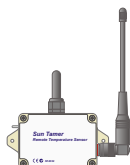

Sun Tamer Series Pool Heating Controllers

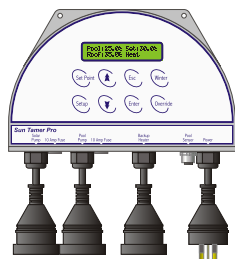

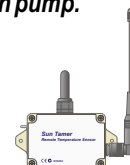

Sun Tamer

- For Solar Heating systems with separate plumbing provisions.
- Radio linked remote roof temperature sensor.

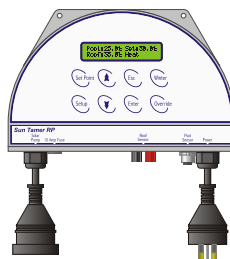

Sun Tamer Plus

- For Solar Heating systems that share the plumbing with the filtration pump.
- Radio linked remote roof temperature sensor.

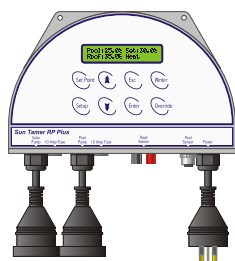

Sun Tamer Pro

- For Solar Heating systems with a gas or electric back-up heater.
- Suitable for systems with separate or shared plumbing provisions.
- Radio linked remote roof temperature sensor.

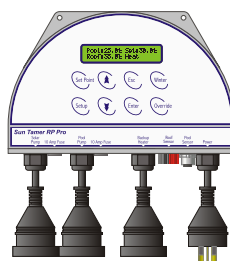

Sun Tamer RP

- For Solar Heating systems with separate plumbing provisions.
- Traditional wired roof temperature sensor.

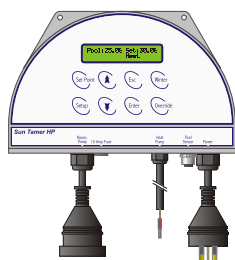

Sun Tamer RP Plus

- For Solar Heating systems that share the plumbing with the filtration pump.
- Traditional wired roof temperature sensor.

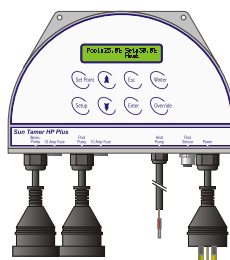

Sun Tamer RP Pro

- For Solar Heating systems with a gas or electric back-up heater.
- Suitable for systems with separate or shared plumbing provisions.
- Traditional wired roof temperature sensor.

Sun Tamer HP

- For Heat Pump Heating systems with separate plumbing provisions.

Sun Tamer HP Plus

- For Heat Pump Heating systems that share plumbing with the filtration pump.

Features common to all models

- Weatherproof outlet sockets can easily be changed to hard-wired configuration.
- Fully waterproof design. Enclosure is rated to IP65 when the mains outputs are hard wired.
- Simultaneous readout of Pool Temperature, Roof Temperature, Set Point and Status. (Roof temperature is only applicable to solar models)
- Backlit display can be read easily day or night.
- Temperature readout to 0.1°C.
- The pool temperature sensor is a screw-in type with an o-ring seal, so it can be mounted on the pressure or suction side of the pump. A female threaded Tee is supplied with the kit.
- Temperature Readout in °C or °F.
- "Plus" units control filtration pump, with 2 programmable pumping cycles per day. Solar models extend the filtration if the pool is cold and there is enough heat on the collectors.

Features exclusive to Solar Heating Models :

- Cooling Mode cools the pool at night in hotter climates. User can enable or disable this mode.
- Manual Override facility.
- Winter mode saves power and preserves collectors and seals.
- Adjustable "Start Heating" time, avoids excessive noise in the early morning in summer.
- All user-settings are saved in permanent memory, even when the unit is unplugged.
- Supercap clock backup for up to 2 weeks if power is lost.
- The wireless roof probe uses 2 standard AAA/LR03 size alkaline batteries. Battery life is several years. The batteries are supplied with the unit, so the wireless roof probe is ready to use, and be installed in just a few minutes.
